## **SmartAlign: Alignment and Distribution for PageMaker 4.2 & 5.0**

### **What are additions?**

PageMaker can't be everything, to everybody, all the time. Even if it could, it would be too big. Additions are utilities that let you add the features you need to PageMaker, when you need them. Typically, each addition provides a new, or enhanced, feature.

### **Why do I need them?**

The reasons vary, but if there is something you need to do in PageMaker that you can't, or it is too hard, then you can probably use an addition. For example, if you need to exactly line up several items across the page, it would be very difficult to do in PageMaker, but very easy with the SmartAlign addition.

### **About SmartAlign...**

To use this copy of SmartAlignDemo.add, simply drop it into the "Additions" folder of your copy of PageMaker®. The additions folder can be found in the "Aldus" folder, which is usually in your "System Folder".

SmartAlign can be purchased directly from Zephyr Design for \$89.00. There is also a bundle offer where you can buy SmartAlign with its sister product, SuperSnap, for \$129.00, almost %30 off! Please include \$5.00 for shipping and handling.

SuperSnap is a floating palette that gives you much greater snapping control than what is currently offered in PageMaker. You can snap any part of an object (sides, center, etc.) to ruler guides, page boundaries, margins, other objects, user-definable grids and more. If you use grids at all, then SuperSnap is a must for you.

SuperSnap is \$89.00 and can be purchased as a bundle with SmartAlign for \$129.00.
