

## Restrictions:

There are two restrictions in the shareware version. You can only add 3 application-document links to your Finder. Since the Finder has two in it already, that means that you can only add one link unless you remove the other two.

You will also only be able to use the first 11 letters (as well as numbers and other characters) of the alphabet as command keys in the Finder menus.

When you register the System 7 Pack!, you'll receive a password to remove both of these restrictions. You will be able to use just about any key on your keyboard for command key shortcuts and you'll be able to add an unlimited number of links!
