

Quick View Plus for Windows 3.1 Technical Support Notes

Table of Contents:

Launch Options

- Closing file on launch
- Setting launch contexts
- Launch instead of view
- Disabling launch for particular viewers
- Launch notes and exceptions
- Launch ID numbers

Format specific information

- Autocad DXF
-

Launch Options

Setting launch contexts

You can control the contexts where Launch is active by placing the following command in the [QVPLUS] section of your SCC.INI file (located in your Windows directory):

LAUNCH={ALL|OIONLY|OFF}

"ALL" enables launching both in the main Quick View Plus program and in the AddOn interface (accessed through OI's E-Mail integrations)

"OIONLY" enables launching in the main Quick View Plus program, but disables it in the AddOn interface.

"OFF" disables launching both in the main Quick View Plus program and in the AddOn interface. When Launch is disabled for all viewers in a particular context, the Launch icon will be grayed out. NOTE: This parameter is overridden by the [LaunchOnly] parameter (see below).

Launch instead of view

If you prefer to use another application to view specific file formats, you can configure Quick View Plus so that particular formats are launched instead of viewed. This feature is supported by Quick View Plus's Microsoft Mail Attachment Handler, Windows File Manager AddOn, and Quick View Plus itself. To enable this feature, you must edit the SCC.INI created by the installation program and add a section as shown below:

[LaunchOnly]

```
ID={YES|NO}
ID={YES|NO}
```

```
.
```

Where 'ID' is a four digit number identifying the file type you wish to have the LaunchOnly behavior. If the value is set to YES, Quick View Plus will not view files of that type but immediately launch the associated application. The id numbers for formats recognized by Quick View Plus are listed in "Launch ID numbers" the end of this section. To enable this feature for file types not recognized by Quick View Plus, add the following line to the [LaunchOnly] section of the SCC.INI:

```
1999=ON
```

For network versions of Quick View Plus, the network administrator may create a SCC.INI in the Quick View Plus network directory which will be duplicated for each workstation during node installation. **NOTE:** The LaunchOnly settings override the value of the "LAUNCH=" parameter discussed above.

Disabling launch for particular viewers

To disable the Launch feature for a particular viewer or group of viewers, you must edit the SCC.INI created by the installation program and add a section as shown below:

```
[DisableLaunch]
ID={YES|NO}
ID={YES|NO}
```

```
.
```

Where 'ID' is a four digit number identifying the file type you wish to disable launching for. If the value is set to YES, Quick View Plus will gray out the launch item for that file type. The id numbers for formats recognized by Quick View Plus are listed in "Launch ID numbers" the end of this section.

If there is a conflict between the LaunchOnly and DisableLaunch settings, such that the same viewer is simultaneously set to launch instead of view and disabled for launching, Quick View Plus will display an error message explaining the conflict.

Launch notes and exceptions

Some applications do not run well under Windows; launching these programs is not supported in Quick View Plus:

```
dBASE III
```

dBASE IV
Microsoft Excel (Ver 2.10 only)
MultiMate 4
MultiMate Advantage II
Paradox
Paradox 3.0
R:Base 3.1
Samna IV

Some applications do not support loading a file from the command line. Quick View Plus will launch these programs, but is not able to load documents for the following applications:

DataEase 4.2
DisplayWrite 2,3,4 & 5
Enable
First Choice
Lotus 1-2-3
Lotus Manuscript
Lotus Symphony
Mass-11
Mosaic Twin
MultiMate 3.6
PC File 5.0
Q&A
Smartware II
Volkswriter 3
VP Planner 3D

The following applications will cause an inactive window to appear when the application is exited. You should close this inactive window before returning to Quick View Plus.

Professional Write 1
MultiMate 3.6
PFS:Professional Plan

If you have difficulty launching files created in applications not found on the lists above, try running the application independently of Quick View Plus. You must be able to run a program from Windows in order to launch the program using Quick View Plus.

Format specific information

Autocad DXF

The DXF filter will view nearly all DXF files created with AutoCAD version 12 and most AutoCAD 13 DXF files. Currently, the DXF filter provides full support for all AutoCAD 13 DXF entities except as follows:

3-D Objects	Rendered in two dimensions
BODY	Not supported.
CIRCLE	Supported only in X-Y plane. Extrusion is supported only where the extrusion direction is parallel to the Z-axis.
DIMENSION	Supported where dimension picture block is available in the block list (all DXF files created with AutoCAD have this).
ELLIPSE	Not supported.
LEADER	Not supported.
MLINE	Not supported.
OLE FRAME	Not supported.
POLYLINE	Full support for 3D polyline, except where extrusion direction is not parallel to the Z-axis. Full support for 3D polygon mesh. Full support for polyface mesh up to a current maximum of 4096 vertices.
REGION	Not supported.
SHAPE	Not supported.
SOLID	Full support except where extrusion direction is not parallel to the Z-axis.
SPLINE	Not supported.
TEXT	Oblique, backward, alignment and upside down are not supported and all text is displayed at 0 degrees rotation. Extrusion is not supported.
TOLERANCE	Not supported.
VIEWPORT	Not supported.

Viewports, 3d solids, light sources & rendering, and other advanced features of DXF are not supported.
