Problems/Solutions

• The name of this Control Panel must NOT be
  changed!

• Problem: It doesn't seem to work!
• Solution: Perhaps TakeABreak has been turned
                off.   Make sure the switch in the lower
                left of the window is in the on position.

• Problem: It causes problems with a certain
                application.
• Solution: From the preferences dialog you can
                create a list of applications that cause
                problems while using TakeABreak.   You
                can add the application to a list of
                special applications (see Customizing
                TakeABreak above).

• Problem: The movie does not play when it
                should:
• Solution: The movie may have been moved or
                deleted, if so, you should either turn
                the "Play QuickTime™ Movie" option
                off and clicking the checkbox on again
