xtreme Mac's HTML Tricks v2.1 is for the determined people who wish to learn html code the easy way. Knowing the actual html code is much more powerful than using a WYSIWYG editor. The more you understand, the better your web page will look, and you will be continually upgrading and updating it. It is a great job and becomes very fun when you begin to have regular visitors to your site.

It's not hard to learn html code. Don't try and memorize it. Just use it frequently when updating your page and refer back here, until you begin to learn the concept of web production. I made this a document so you can read it off line. Don't waste time searching for other html web pages. Don't waste your online time if you are charged hourly rates. Read Extreme Mac's HTML Tricks v2.1 to give you everything you need to begin (or expand) the world of a Web Author.

If you do however prefer to use an online version, go to:
