elow are different ways you can align your text on your page, to give it a sharper look. Each example gives the text a professional look to the lists.

Unordered List (Dotted)
<UL>
<LI>First row
<LI>Second row
</UL>
•This would look like this:
    •First row
    •Second row

Ordered List (Numbered)
<OL>
<LI>First row
<LI>Second row
</OL>
•This would look like this:
    1. First row
    2. Second row

Preformatted Text - The text here will appear on the web page as it does in the html code.
<PRE>
This   Will
stay   as
written exactly
</PRE>
•This will look like this:

dd one of these into your html. I'll use the preformatted text in my example. The preformatted text is good at making pictures with letters. Here's a quick example:
<pre>
  //   //   //////
 /////   //
// //   //////
</pre>

•Your page should now look similar to:

xtreme Mac

```
 //   //   //////
 /////        //
// //     //////
```

• Your html code should now look similar to:

<html>
<HEAD>
<TITLE>Put the Title Here</TITLE>
</HEAD>
<body bgcolor="#ffffff" background="imagelocation.gif" text="#000000" link="#0000ff" vlink="#00005a">

```
<FONT COLOR="DD0000"> <center><h1><b>Extreme
Mac</b></h1></center></FONT>
<p>
<pre>
   //    //    //////
 /////          //
// //      //////
</pre>
<p>
</body>
</html>
```
