

## **Holy Bible for Windows Version 2.0**

### **Introduction**

The Holy Bible for Windows was written in the hopes that all of us would find it easy to read and motivate us to read this Book more often. The program was compiled with the Windows 3.1 Help Compiler and requires Windows 3.1 and the Windows Help file program. It is my every hope and intention that this King James Bible is error free and will be a good resource for all. It is a highly modified Help file that contains many features that many who study the bible will find useful. Annotations, and notepad are two additions you will find as buttons that are not standard on most Windows Help Files.

### **Features**

**Contents:** This will place you to the listing of all books found in a certain testament in the Bible.

**Search, Back and History:** These buttons are all like the standard Help files found in all Windows Help Files.

**About:** Standard "About" which tells you about the program.

**King James Bible:** Brings up the opening Bible upon program startup.

**Testament Index:** Takes you to the Testament Index in which you choose the Old or New Testament.

**Annotate:** Allows the user to save an annotation in all books of the bible which are saved even after you exit the program.

**Notepad:** This brings up the standard Windows Notepad program to save various information.

**Exit:** This button allows the user to quickly exit The Holy Bible for Windows.

### **Registration**

The Holy Bible for Windows is being released as shareware and you are entitled to use the program free of charge for 30 days. If after 30 days you continue to use this program, I would appreciate a registration fee of 30 dollars. An order form ("order.frm") is include with the program package.
