[Copy/cut/paste a portion of icon](#)

Pen tool allows to draw. The mouse cursor changes to a pen.

When drawing, either mouse button may be used. Each mouse button has an associated color shown in the mouse color rectangles below the color palette. Select a color for each mouse button by clicking the button on the desired color in a restore default or personalized palette.

There are 16 pure colors, 32 dithered colors plus the special transparent and inverted colors.

To draw with a pen

1. Select the pen tool.
2. Click on the mouse button to paint pixels.
3. Release the mouse button.

Line tool draws straight line one, two or three pixels wide.

Line is drawn by pressing a mouse button at the desired starting point, dragging the mouse while holding the button down, and then releasing the mouse button at the desired ending point. When a figure tool is selected, the cursor in the editor contents will be a cross.

To draw a line

1. Select the line tool.
2. Press a mouse button at the desired start point (The line will be drawn in the color associated with the mouse button used).
3. Drag to the desired end point (During the drag a ghost line appears).
4. Release the mouse button.

Poor tool (pain can) allows changing the color of a contiguous area having the same color as the starting point. Other non-contiguous occurrences of the color are not change.

To fill an area

1. Select the poor tool.
2. Click a mouse button anywhere inside the area whose color must be changed.
The new color will be the color associated with the mouse button used.

Remark

You can make a vertical or horizontal dithering mode to draw your filled rectangle or circle.

You should choose two colors in the restore default or personalized palette and associated with the right and left mouse buttons.

If you click on the left mouse button, the horizontal/vertical dithering mode is done from the left color to the right color.

If you click on the right mouse button, the horizontal/vertical dithering mode is done from the right color to the left color.

Hollow rectangle tool is drawn one, two or three pixels thick and the inside of the rectangle is not altered.

To draw a hollow rectangle

1. Select the hollow rectangle tool.
2. Press a mouse button at the desired start point. The rectangle will be drawn in the color associated with the mouse button used.
3. Drag to the desired end point (During the drag a ghost rectangle appears).
4. Release the mouse button.

Filled rectangle tool is completely colored in the color of the mouse button used.

To draw a filled rectangle

1. Select the filled rectangle tool.
2. Press a mouse button at the desired start point. The rectangle will be drawn in the color associated with the mouse button used.
3. Drag to the desired end point (During the drag a ghost rectangle appears).
4. Release the mouse button.

Hollow circle tool is drawn one, two or three pixels thick and the inside of the circle is not altered.
To draw a hollow circle
See **Hollow rectangle tool**.

Filled circle tool is completely colored in the color of the mouse button used.

To draw a filled circle

See **Filled rectangle tool**

Tips

Create a new icon library

A new icon library is composed of a .DLL file and one or several icons. Each icon can be edited and used separately.

Procedure

1. Choose <File><New library> or .

The dialog box "Create a new icon library" opens.

Click on the following picture to have help.

2. Enter the library name which will display in the list.
3. Enter the DLL filename.
4. Click <OK>.
5. Create new icons or import existed icons (see [Create a new icon into the current library](#) and [Import an icon in the current library](#)) and modify them (see [Replace the selected icon with editor contents](#)).
6. If you want to add them into the new library, you can choose one of these two cases :
 - a. You have created a new icon, choose <File><Add Icon>. The icon editor will add at the end of the library. (see [Add icon in the library](#)).
 - b. You have imported a DLL; .EXE or .ICO file which contains an icon. Choose the option "Automatic insert into library" of the command <Tools><Preferences>. The editor icon will add at the end of the library. If the import file contains several icons, a button "Import all icons", is proposed you to add all icons into the current library.

Import one or several icons in the current library

You can import one or several icons from a .EXE, .DLL or .ICO file.

Remark

When you choose **<File><Import icon>**, one or several icons are automatically added into the current library.

If the .DLL, .ICO or .EXE import file contains only an icon, you can choose the option **"Automatic insert into library "** in the command **<Tools><Preferences>** and the icon is loaded in the editor and will add at the end of the selected library.

If the .DLL, .ICO or .EXE import file contains several icons, you can choose the option **"Import all icons"** and all icons will add at the end of the selected library.

Warning

Windows icons have only 16 colors. If you create icons by mode 256 colors or plus, they are defined in the editor and saved in the libraries in 16 colors. Windows lays down the rule (16 colors palette).

Procedure

1. Choose **<File><Import an icon in the current library>** or .
2. Choose in the dialog box **"Import icon "** the selected .DLL, .EXE ou .ICO filemane and **<OK>**. AX-ICON automatically displays the icon in the editor contents or displays all icons in the box "Import icons". You can choose one icon or import them all into the current library.

Add one or several icons into the current library after import

1. If the option **"Automatic insert into library "** is activated and if the import file only contains an icon, the icon will add into the current library.

If the import file contains all icons, the button **"Import all icons"** will be you proposed. One or several icons will add at the end of current library.

Related topics

[Customize the way AX-ICON works](#)

Export the selected icon to an .ICO file

You can create your own .ICO file by exporting the icon which finds in the editor contents.

Warning

This file will only contain an icon.

Procedure

1. Draw or import an icon.
2. Choose **<File><Export icon >** or .
3. The dialog box "**Export icon**" opens. Enter the .ICO file and **<OK>**.

Related topics

[Import an icon in the current library](#)

Capture a portion of a screen to generate an icon

You can capture a portion of a screen and turn it into an icon 32x32 pixels.

When you choose **<Edit> <Icon capture>**, AX-ICON disappears and the mouse cursor changes to a camera. Move the cursor on a portion of a screen to capture and click on the left mouse button. The selected image displays in the editor contents.

A captured portion of a screen will not have any transparent areas, even if you capturing an image of another icon that was drawn with transparency.

Warning

Windows icons have only 16 colors. If you create icons by mode 256 colors or plus, they are defined in the editor contents and save in the libraries in 16 colors. Windows lays down the rule (16 colors palette).

Procedure

1. Choose **<Edit><Icon capture>**
2. AX-ICON disappears. The mouse cursor changes to a camera.
Select a portion of a screen and click on the left mouse button.
3. The selected image displays in the editor contents.
4. you can modify this icon, create your own .ICO file or add into the selected library.

Restore default color palette

AX-ICON proposes you the default 48 colors palette (16 pure colors, 32 dithered colors plus transparent and inverted colors). It's possible to personalize this palette by creating your own colors with RVB percentage or standard Windows 3.1 dialog box.

Procedure

1. Select the color in palette.
2. Double-click on it. The Windows standard dialog box "Colors" opens.
3. Modify your color.
4. If you want to add the personalized color, click on the button **"Add color"**. It will add in personalized color palette and replace the selected color in default color palette.

Warning

AX-ICON will automatically save the personalized color palette. However, if you click on <Tools> <Default color palette>, a message will display that this option will erase your personalized color palette. Confirm or not confirm.

Related topics

Drawing tools

Transparent and inverted buttons

The transparent and inverted buttons

Each pixels of icons can have transparent and inverted attributes. If transparent, the color displayed for the icon pixels is the color of the screen over which the icon is written. This capability enables icons to appear in shapes other than rectangles.

Inverted transparency displays the inverted color of the background over which it is written. Outlining an icon in inverse assures that its edges will always stand out against any color background.

If you choose the transparent color, AX-ICON will display the pattern that you will have chosen in the command <Tools><Preferences> associated with pale green color.

- . ***Closed dots***
- . ***Hatched***
- . ***Spaced dot***
- . ***Solid***

If you choose the inverted button, AX-ICON will display the pattern that you will have chosen (see top) associated with dark green color (inverse transparent color).

Remark

When you try icon, you can see the transparent and inverted areas (These areas will invert the colors on which you will make drag icon).

Customize the way AX-ICON works

You can personalize AX-ICON by changing editor parameters or import options.

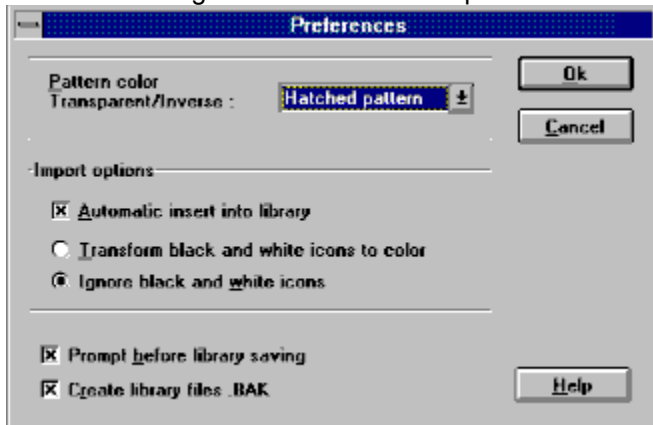

- . Choose the transparent and inverted color pattern
 - . **Closed dots**
 - . **Hatched**
 - . **Spaced dot**
 - . **Solid**

- . Choose import options
 - Automatic insert into library**
 - Transform black and white icons to color**
 - Ignore black and white icons**
 - Valid before library saving**
 - Create library files **.BAK****

Procedure

1. Choose <Tools><Preferences>.
The dialog box "Preferences" opens.

Click on the following picture to have help.

Choose in the list, the transparent and inverted color pattern in the editor.

After the importation, the icon will automatically add at the end of the library.

Remark

If the .DLL, .ICO or .EXE import file contains only an icon, you can choose the option "**Automatic insert into library**" in the command <Tools><Preferences>, the icon is loaded in the editor contents and will add at the end of the selected library.

If the .DLL, .ICO or .EXE import file contains several icons, you can choose the option "**Import all icons**" and all icons will add in the selected library.

Transforms black and white icons to color when you import a.DLL, .ICO or .EXE file.

Ignores black and white icon when you import .DLL, .ICO ou .EXE file.

Displays a valid message before library saving.

Creates library files .BAK after modification.

Try icon

This command allows to try the drawn icon in the editor. AX-ICON will place at the bottom of the screen and will be presented by this icon. You can deplace it to test the differents colors.

Procedure

1. Draw a new icon, choose an icon or import an icon.
2. Choose **<Tools><Try icon>**.

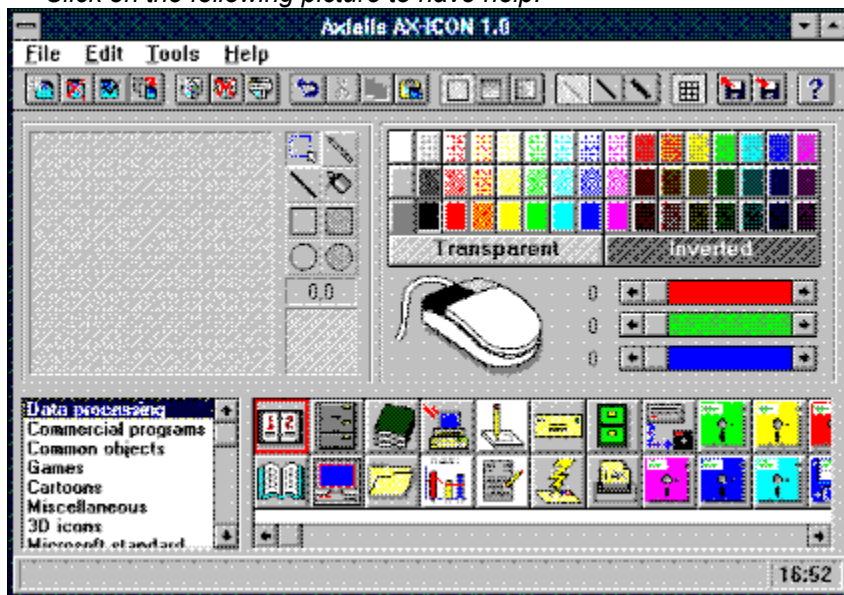

AX-ICON places at the bottom of a screen. it is presented by the icon editor. You can deplace it to test the differents colors.

Tip

It is enough to click in the 32x32 pixels icon to try it.(see fig 1 : The main window).
