Executor/DOS Version 1.2

Hardware Requirements
386 or better, VGA, 5 Mb disk space,
3.5" 1.4 Mb floppy drive, 4 Mb RAM, SCSI Controller needed only if you want to access *external* Macintosh hard disks or PowerBooks.

Suggested Retail Price $99

Shipping   Now

Limitations in Version 1.2
Some programs run; many do not. No color, sound, or system 7 support.   No INITs or CDEVs, no serial port support, or printing. *Does* run under Windows, but *does not* support cut and paste between multiple invocations of Executor.

Speed

A 66 MHz '486 DX2 is roughly comparable to a 20 MHz 68030 based Macintosh.

Some Programs That Run
Word, Excel, Quicken, Managing Your Money, A-Train, MacMoney, Lemmings, Prince of Persia, Risk, Leprechaun, Stuffit, Compact Pro, Stella, MicroGrade

Demo Available
A time limited DEMO of Executor/DOS 1.2 is the best way to see the power of Executor.   The demo version allows you to do everything that Executor/DOS does, except read Mac formatted SCSI disks. and the demo version only runs for ten minutes at a time.   Look for EXCTR12A.ZIP on your favorite bulletin board (or oak.oakland.edu in pub/msdos/emulator).

Summary
Executor/DOS 1.2 is priced competitively with other programs that only allow PCs to read and write Macintosh-formatted floppies.

Executor provides that functionality, **can run Macintosh programs** and, on PCs with SCSI cards, can also read and write Macintosh formatted SCSI disks.

Executor/PC Version 2.0
(specifications subject to change)

Hardware Requirements
386 or better (486 recommenced for color), VGA, 10 Mb disk space, 3.5 1.4 Mb floppy drive, 4 Mb RAM, SCSI Controller needed only if you want to access *external* Macintosh hard disks or PowerBooks.

Suggested Retail Price $249

Upgrade Price

for Executor/DOS 1.x owners $59

Estimated Ship Date   Summer, 1994

Improvements Over Executor/DOS 1.1
   Most programs will run.   Color support, some System 7 support,
   printing support, some sound support, serial port support.   Inter-
   Application cut and paste support under Windows, OS/2 and
   Windows NT.   Will have a locally written, or licensed from a third
   party, Finder.

Limitations in Version 2.0
   No networking support, no INIT and CDEV support, no support for
   Apples Finder.

Speed
   Twice that of Executor/DOS 1.2

Summary

For many requirements, Executor 2.0 will be an acceptable replacement for a Macintosh.

About ARDI

ARDI is the only company currently shipping binary Macintosh compatible software products for the PC that don't require system software from Apple Computer Inc.   We have been shipping Executor/NEXTSTEP, a Macintosh emulator for NeXT computers for two and a half years.

ARDI is a privately held Delaware corporation with primary offices in Albuquerque, New Mexico.
