Upgrading to v3.0

Be sure to read the NEW.TXT file to see what is new! Everything that is new from version 2.5 is included in that file.

You should make a BACKUP before upgrading!!!

To upgrade, go to your PowerBBS directory and run the POWRMAIN.EXE file. Extract all the of the non data files, do not delete your old data files (such as Powrbbs.dat, etc). If you are not sure, do not overwrite!

Change to your root directory (such as C:\ if PowerBBS is located on the C: drive). Run the powrfile.exe program. All ALL prompts to OVERWRITE? (Y/N), enter NO! (THATS NO!)
