Welcome to

Welcome to **Quick View Plus for Windows 3.1**. If you have not already done so, please register to receive free technical support and discounts on future versions of *Quick View Plus*. You can fax or mail the enclosed form or, if you have a modem, you can register electronically. If you are using the trial version of *Quick View Plus* you will automatically be registered when you purchase the product electronically.

This document includes information on what's new in this version, contact information for Inso Corporation, last minute technical notes, and a list of the file formats that *Quick View Plus* supports. More technical information can be found in the text file TECHNOTE.TXT, the user's manual, and the Help system.

This document is only viewed when *Quick View Plus* is run for the first time. If you wish to view it at a later time, it is README.DOC in the directory where you installed *Quick View Plus*. This directory also contains sample files, all of which begin with the letters SMP.

➢ What's New

Quick View Plus release 3.0.3 includes Netscape Navigator 2.0 plug-in support for all Quick View Plus supported formats. Navigator uses plug-ins to view files in formats that it does not understand. Plug-ins are used when you click on a link to a file that isn't a normal web page, when a web page has a file embedded in it, and when you receive attachments in Netscape mail.

Individual users can use plug-ins as an alternative to setting up many different Helper Applications for file formats like ZIP, Microsoft Word, Tar, and all the other formats Quick View Plus supports.

Corporations can use plug-ins to publish non-HTML files on their corporate intranets. This saves Webmasters the time, money and headache of manually converting everything to HTML.

Technical notes and additional information on ways to use Quick View Plus's plug-ins are available in the document NETSCAPE.DOC.

➢ Last Minute Technical Notes

Note on SHARE.EXE

If SHARE is not loaded into memory on your system through AUTOEXEC.BAT (or VSHARE.386 through the SYSTEM.INI file), you will not be able to activate embedded objects in Microsoft Word for Windows 6.0 documents. They will appear in a separate view window when you double-click on them.

Normally, SHARE is loaded into memory by a line in your AUTOEXEC.BAT file. If you need to add SHARE, add the following line to your AUTOEXEC.BAT (assuming C:\DOS as the location of your DOS files):

```
C:\DOS\SHARE.EXE /L:500 /F:5100
```

The switches /L and /F set locking and storage parameters for SHARE to the minimum values recommended by Microsoft when SHARE is used with OLE2. The line should follow the PATH statement but precede any statement that starts Windows or otherwise prevents SHARE from being executed. After adding the line, save the revised AUTOEXEC.BAT file and reboot your machine so the change will take effect. If the Quick View Plus Installation program detects that SHARE is not loaded into memory, it will present a warning message at the end of installation. For more information on SHARE.EXE, see your DOS manual.

Alternatively, you can add the following line to the [386enh] section of the SYSTEM.INI file in the Windows directory:

DEVICE=VSHARE.386

Note on possible AddOn Manager conflicts

On certain systems where Quick View Plus is installed, there is a slight possibility that Windows will hang when exiting Program Manager. This problem can be caused by conflicts between the AddOn manager load statement and other programs loaded through the LOAD statement in the WIN.INI file, particularly NETDDE.EXE. If you encounter this problem, move the OIADDON load statement to the beginning of the load line, and the problem should disappear.

Note on installing over Outside In

Quick View Plus will remove (with your permission) earlier installations of Outside In before installing itself. When this occurs, all the Outside In program files will be removed from your hard disk, and all your Email and file manager integrations will be replaced with Quick View Plus integrations. However, the word processing integration into Microsoft Word for Windows will not be removed. The "Outside In" menu item will still display on the Tools menu.

To remove this item, in Microsoft Word for Windows 6.0
  1. Choose Tools/Customize
  2. Select the Menus tab
  3. In the Categories group, select Tools
  4. In the Position On Menu dropdown list, choose Outside In
  5. Choose the REMOVE button. The menu item is deleted.

Ø Supported File Formats

Document formats	
Ami / Ami Professional	Versions through 3.1
DEC WPS Plus (DX)	Versions through 4.1
DisplayWrite 2 & 3 (TXT)	All versions
DisplayWrite 4 & 5	Versions through Release 2.0
