Canopus Quick Control 2.0

The QuickControl utility allows you to change your display settings on the fly and during game play.
For more information about this utility, please refer to the User Manual.

This window lists the installed Key Sets. A Key Set is a set of assigned hot keys. The currently active Key Set is highlighted.   Key Sets could be added to this list with the "New..." button, changed by using the "Edit..." button, and removed by using   the "Delete..." button.

Press this button to bring up a dialog to add a new Key Set to the list.

Select a Key Set in the Key Set list and press this button to bring up a dialog to change the Key Set assignment.

Select a Key Set in the Key Set   list and press this button to delete the selected key set. The <Default> Key Set can not be deleted.

Change the name of the Key Set in this edit box.

Check this box to display all of the available functions.

This window   lists the functions available and the hot keys which they are mapped to. The key assignment can be changed by double clicking on a function or selecting one and then clicking the "Change..." button.

Check this box so a warning sound will beep when reaching the limits of the modified value.

Select a function in the hot key list and press this button to bring up a dialog to change the key assignment.

Check this box so the changes will be saved and valid even after a reboot.

Check this box so QuickControl will always be started with Windows.
