

FAUVE MATISSE SOFTWARE UNVEILED AT SIGGRAPH '93

Fauve Software, Inc., a software development company based in Cary, North Carolina, unveiled Fauve Matisse, the latest and most advanced paint program for the PC, at Siggraph '93.

With features like multi-tipped oil brushes, drag and drop images objects, editable shapes, user-defined textures, variable brush smoothing and blackness control, Fauve Matisse improves and extends the functionality of both Fractal Painter and Adobe PhotoShop.

"Fauve Matisse contains all the brushed you would find in an artist's paint box," said Fred Krueger, president of Fauve Software. "We have taken great pains to make these tools behave the way an artist would expect them to," he said.

A well thought out user interfece makes this new product accessible to the novice user as well. During Beta testing over the last five months, users of Fauve Matisse have remarked on the short learning curve necessary to master the intricacies of the software.

"My students caught on to it with little difficulty and almost no instruction," said Patrick Murphy, compute rart and animation instructor at the School of Communication Arts in Raleigh, NC. "Matisse is extremely versatile, if you are looking for a paint program that emulates traditional mediums to a tee, this is the one," Murphy said.

Fine artists who have been skeptical of computer products have been won over to Fauve Matisse. "In my experience, Fauve Matisse is the most exceptional, versatile graphics program available to creative artists," said Bill Tilton, columnist for Artist's Magazine.

Fauve Matisse is available through an introductory offer for a limited time at \$99. (It has a suggested retail price of \$399). For further information, contact Fauve Software at 1-800-898-ARTS.
