MONARCH VERSION 2 FEATURES:

Monarch runs on any IBM-compatible PC with a hard disk and at least 512K of memory. A mouse is supported but not required. Works great stand-alone or on a network, including Novell, IBM, Microsoft, Banyan, LANtastic, 3Com, DCA and others.

Operates interactively, or can be automated to run as part of an unattended batch-file operation. Extensive context-sensitive HELP.

INPUT TO MONARCH

Monarch can read report files that come from any mainframe, mini or PC. Download a report from the print queue or file server, or get a report on diskette. Monarch can also intercept reports at print-time. Accepts simple columnar reports PLUS complex reports with headers, footers and multiple sort levels. Also accepts DBF and delimited ASCII as input. Reports are displayed on screen for easy lookup and navigation.

DATA EXTRACTION

At the head of Monarch is a powerful data extraction engine that can pull data out of any computer-generated report. A user-defined template is overlaid on the report to identify desired data. Data types are automatically recognized so date fields, numeric fields and character fields are maintained in proper format.

Don't confuse Monarch with conventional parsing routines that simply break a line of data into separate fields. Monarch offers "smart parsing," including the ability to extract, recognize, and associate data drawn from different levels in a complex report. Monarch can even parse address blocks, and names such as Mr. John Q. Public, Jr. so the resulting fields make sense!

DATA PROCESSING AND REPORTING

Data is extracted and placed in a table where it is available for further processing. Create new virtual fields with an extensive library of numerical, logical, and string functions. Filter data with easy user-defined criteria statements. Rearrange data any way you want. Generate new summary reports, including one-way, two-way and n-way crosstabs.

OUTPUT AND TRANSLATION

Monarch can send formatted data to virtually any PC application including 1-2-3, Excel, Quattro, dBASE, Paradox, Access, FoxBASE, MS Word, WordPerfect, Harvard Graphics, Corel and hundreds more. Exports WKS, WK1, WK3, DBF, delimited ASCII, fixed length ASCII, TXT and more. Produces printed output on local and network printers.

SUGGESTED RETAIL PRICE: \$295.00 Call 1-800-445-3311 for more information.
