Eg2i Excelsior grade2 Interface

OVERVIEW: Using the power of network communications, Excelsior **grade2** Interface (EG2I) provides for exchanging data between **grade2** class files and any other application. Class schedule databases can be used to build class files at the beginning of the school year and grades can be collected at the end of the grading period to build report cards. Attendance information is collected at any time directly from the teacher's **grade2** class files and student information may be imported or exported from the class files. EG2I connects to the teacher's class file for direct exchange of data.

SETTING UP CLASSES: EG2I facilitates creating classes at the beginning of the grading period by transferring from databases into class file templates. Each class can be built using lists of students including complete demographic information, lists of mastery objectives or even class grading structures. These databases may be in any of the popular administrative packages or developed by a member of scheduling personnel in a database program. This procedure can be a great time saver for the class room teacher.

COLLECTING GRADES: At the end of any grading period, EG2I can be used to gather grades from all of the class files and build a data file. This data file can easily be used by any administrative package or database program to build comprehensive report cards or other required reports. With the EG2I interface, teachers do not spend time transferring grades from their class files to paper reports or bubble sheets.

RECORDING ATTENDANCE: Data for attendance reporting is collected quickly and efficiently through the exchange ability of EG2I. Attendance information can then be transferred to the central office as soon as it is recorded in the teacher's class file.

APPLICATION - COMMUNICATING WITH STUDENTS, COUNSELORS, AND PARENTS: The **grade2** Student Viewer is an application developed by Excelsior which uses EG2I to prepare individualized reports about a student. These reports may be viewed by the student and by individuals responsible for the student. Now students can independently stay up to date with their scores, attendance, progress notes and discipline information without adding to a teacher's already demanding work load. Also, the teacher has complete control over what is accessible to the students.

REQUIREMENTS: IBM or compatible network, Excelsior **grade2** (Network Version), or Site License or an IBM EdLan software license.

PRICE: Base price of the product is $595.00 and allows for unlimited access to one server.

ALSO AVAILABLE:
Excelsior grade2 Personal Edition (DOS or Mac)
Excelsior grade2 Interface (EG2I)
Student Viewer for grade2 network
Excelsior quiz2 (DOS or Mac)
Network Companion for grade2 (DOS, Windows or Mac)
Pack of 5 product manuals
Pack of 5 grade2 Self Pace Learning Modules
