

Cirrus Logic Video Drivers
Douglas K. Manning, Sarasota, FL, USA

Just a comment to throw out to everybody using the Cirrus Logic (5426 Chip) Video card. If you have been having problems running Nautilus in either 64K or 16.7M color mode there is a solution. What you need to do is get the new version of the video driver (Version 1.3) from your dealer or from your favorite BBS. On the BBS it might not mention the version number but it is the version that also gives you access to 1024x768x64K and 1280x1024x256 colors. Your dealer can download them from the Cirrus Logic BBS for you if you still can't find them.
