

Drag and Drop

Curtis P. Nelson, Bremerton, WA, USA

I would like to see the incorporation of the drag and drop interface into the Nautilus shell. That way, I could read text files with my favorite word processor or edit free use photographs without having to go to File Manager.

**From the Tech Desk:**

**You can open a file by using Windows associations rather than by the Nautilus Shell. Simply hold down the CTRL key while clicking on the file. For instance, if you have .WAV files associated with Sound Recorder, then holding down the CTRL key while opening a .WAV file will open that file in Sound Recorder, giving you more control over volume, etc. For more information, see the NAUTIPS1.WRI file in the Nemo Notes section.**
