

CORNWALL from RaelType Foundry
Version 1.0
March 1988

Greetings! Cornwall is the first in a series of somewhat cheap-looking typefaces. Cornwall can be compared to heavy metal both are a bit grotesque but both serve a purpose in the world.

One major oddity: For open quotes, hit the quote key with the shift key up. If you want double quotes, hit the key twice. For close quotes, hit the quote key with the shift key down. Hit the key twice for double quotes. (If you dont understand what in the hell Im trying to say just play around with the font. Youll catch on.)

Most characters you would expect in a font, such as foreign symbols and ligatures, are used. A later release might even have more stuff in it.

The bitmap version has been cleaned up and looks great on an ImageWriter.

This is a kind of rough version but it looks OK, prints OK and has its uses. Play with it and well see what develops.

By the way ... THIS TYPEFACE IS FREE OF CHARGE. PLEASE USE IT EVERYWHERE AND GIVE IT TO ANYONE WHO WILL USE IT.

The design is, however, © 1988 RaelType Foundry
Designed by Rael

Make sure and see the special character press option-shift-V...
