

The Best of Sound Bytes Volume 1

The Best of Sound Bytes Volume 1 is a diverse collection of music, audio tracks and waveforms compiled from over twelve issues of Nautilus. Thanks to contributions from a number of professional musicians and audio enthusiasts, a great combination of audio production music and sound effects can be found on this single disc.

The disc contains twenty multimedia music beds, twelve sound effects, and two 60-second spots. Each Multimedia Bed is presented in four standard lengths -- 60, 30, 15 and 5 second versions.

All sound files have been recorded in two formats:

22.05 kHz 8 bit .WAV file format

44.1 kHz 16 bit .WAV file format

The .WAV files are compatible with the MPC (Multimedia PC) standard. Use of these files requires a PC running Windows 3.0 and Multimedia Extensions or Windows 3.1. The files also require MPC (Multimedia PC) hardware or equivalent digital audio hardware and software. They can be previewed through the Nautilus Shell.

You are welcome to submit your own sound bytes to Nautilus! See the submission information in the Nautilus Services section on this disc for more information.

The Best of Sound Bytes Volume 1 has a suggested retail price of \$49.95, but Nautilus subscribers can purchase it for \$29.95. To place your order, see the order form (OFFERS.WRI) in the CD ROM Directory or call 800/637-3472 (614/766-3165 for International callers) or [Link to us](#). We look forward to hearing from you.
