First Time Link User
Bruce K. Haley, Charleston, WV, USA

Just used Link for the first time and when you say "That's all there is to it..." you weren't kidding. I'm embarrassed that I haven't used it before now!

I was having a problem getting Windows to accept my Com Port 4 setting. This may help some of your other users. If you are using Com Port 4: 1. Go to the Control Panel in Windows 3.1. 2. Select Com Ports. 3. Select Com4 and then Settings. 4. Select Advanced. 5. Select Base I/O Port Address and change to 02E8. 6. Set IRQ to 3 and there you have it. You may have to play with the IRQ setting, but if you haven't been using Link because of problems with Windows, this may solve your problem. And I encourage all to make full use of Link to help Nautilus become an even greater magazine than it already is!
