

Your Drivers Here
David Jaquay, Marietta, GA, USA

Just a thought: Maybe keep the updated MSCDEX driver on the disc. It's small and may be helpful to someone.

From the Nautilus Team:

The MSCDEX driver must be licensed from Microsoft, and we have no intention of licensing it at this time. However, we can tell you that it is included with DOS 6.0, so if you upgraded, you already have it. Thanks for the suggestion.
