

Introduction

Getting files off of your system is a lot harder than installing them. Megabytes of junk files on your hard disk waste space, slowdown your system, and conflict with software. The solution to this overcrowded mess is Uninstall Manager. Uninstall Manager is the program that lets you safely remove unwanted software and return your system to its original state.

This tutorial will guide you through the process of using Uninstall Manager :

- [Step by step how to use](#)

- [Version History](#)

[Next : How to use](#)

Step by Step How to Use

Uninstallation procedure is very simple :

Step 1: Start Uninstall Manager and take a snapshot of your drive(s) with "Snapshot" button.

Step 2: Backup your startup and registry files with "Backup System Files" button. Now your system is ready for new installations.

Step 3: Close Uninstall Manager then install or run any program that you wish.

Step 4: To see any changes that have been made to your system since your last snapshot, simply start Uninstall Manager and press the "Find New Additions" button.

Step 5: There will be a panel on the left that shows any new folders and a panel on the right that will show any new files that have been added to your system. You can now choose to delete individual files or folders that you select or all files and folders newly added.

Step 6: Finally from "System" menu you can choose "Restore System Files" (or press it's button) to return your system to its settings before the installation.

It is as easy as this.

[Next : Tools](#)

Tools to keep your drive tidy

Check Overwrite : Some installations can overwrite windows system files without notification. This can cause your system to not work properly. With the " Check Overwrite " tool (in tools menu) you can check these files to see if any changes have been made. This tool is for expert users only. Do not use this tool if you don't understand windows dlls.

Quick Clean : With this command you can delete temporary files to save harddisk space.

Send to File : Use this tool to save the file names that are listed in the right panel for future reference.

[Next : Configuring U.M.](#)

Configuring U.M.

You can configure U.M. from the "Options" menu.

Send deleted files to recycle bin :

Recommended if you are not sure about the files you delete. Later, if necessary, you can use the recycle bin to restore deleted files.

Automatic compare at startup :

Check this option if you want to start the "check new files" operation whenever you start Uninstall Manager.

Show file icons :

Check this option to see icons of files that are listed.(this will cause some slow down while scanning)

Don't list msie (or netscape) caches :

We recommend that you check this option. When this option is checked msie and netscape caches won't be listed. These caches are controlled and managed by the browsers. To delete these caches could cause a slow down in your internet surfing. However, if you want to delete these caches to save hard drive space (another benefit to having U.M.), don't check this option and the files will be listed.

[Next : Keybord Reference](#)

Keyboard Reference

Keys	: Operation
Delete	: To delete files.
F3	: To view files.
Esc	: To close view panel.
Ctrl , Shift	: To select multiple files.

Note: The selection of multiple files in Uninstall Manager is same as with the windows explorer. Hold down the left mouse button and drag to make a box that selects multiple files. Or you can hold the ctrl or shift key while pressing the up or down arrow key.

[Next : Tips & Tricks](#)

TIPS & TRICKS

- You can use popup menus in the file or folder panel by right clicking the mouse button.
- Generally in the changes panel you will see that user.dat and system.dat are checked, without having installed anything. This is because Windows 95 uses and changes these files frequently.
- If you can't delete a file, this means the file is in use by windows. To delete this file, first restore your system files then try to delete file again.
- Use slots for multiple snapshots and backups. Slot usage is like game saves. You can save the last position of your system to any slot. Also you can write a description for it.

[Next : Registration](#)

Registration

As a registered user you will receive:

- A registration key for unlocking this software. (Reminder screen will disappear)
- Lifetime FREE upgrades to new releases of the program (register now and do not be affected by future price changes.)
- Free technical support and information on new products.
- And a feeling that you did the right thing.

How to register :

1 - You can register online with credit card at :

<http://www.regnow.com/softsell/nph-softsell.cgi?item=1266-1>

or connect to <http://www.regnow.com>
and type 1266-1 in product-id (it is in order section)

(Tip: You can the press "Register Online" button in the help menu to automatically connect this website.)

2 - You can send your order form plus 12.95 US\$ or 25 DM cash to

Postal mail : Ahmet Hidayetoglu
Karli Kayin sok. No: 6/10
06550 Y.Ayranci Ankara, Turkey

And e-mail us that you have sent the postal mail.

E-mail : nokta@starmail.com

3 - You can transfer the money to

Bank account: International US \$ account

Pamuk Bank,Ankara/Turkey
SWIFT Code : PAMUTRIS
Bank Code : 192
Account no : 23866248
Account holder : Ahmet Hidayetoglu

And e-mail us that you have transferred the money.

E-mail : nokta@starmail.com
