ClickDown 5.10 for Windows 95

ClickDown can be used in one of two ways.   The first is to create an icon, or shortcut, on your desktop that would tell ClickDown to shut down, reboot, restart in MS-DOS Mode, or log off of the network.   The second is to have ClickDown load (normally automatically, when Windows starts) and create an icon in the task bar that, when double-clicked on, will shut down the computer or do any other specified task.   If the user right-clicks on the icon, a popup menu appears that allows the user to shut down, reboot, restart in MS-DOS Mode, or log off of the network. This menu can be changed from the Configure window and can include user-defined programs.

This is the Shareware version of ClickDown.   This version **DOES NOT** expire.   You may use it for as long as you wish.   However, you must register to use some of the advanced features.   Registration costs only $8.00.   See the Help file or contact us for more information.
