----

1. Install / Uninstall

To install the program execute the split.exe program and click on the Install
button.
To uninstall the program choose the item 'Split File Shell Extension v2.1' on the
list of the Add/Remove programs panel in the control panel and click on the
Add/Remove button.

2. User guide

2.1. Options

The user can select a default target directory for the split files or can use the
directory of the file to split as default target directory.

The files generated by Split File Shell Extension can't be merged by using the
DOS command **copy /b**, unless the check box in the Option dialog box is checked.
Warning : When this compatibility is enabled, the generated files can't be merged
by Split File Shell Extension earlier than version 2.0.

2.2. Split a file

To split a file, you must choose the 'Split file' command in the contextual menu
(available with a click on the right button under explorer). A window is
displayed allowing to select the different options available :

- You can choose the target directory for the generated files by the Split
program (files with extension .spl or .sfe). To facilitate this operation you can
use a hierarchical browser by clicking on the Browser button.

- You can also choose the size (or number) of generated files. Four predefined
size are available for a floppy drive target.

- To start the splitting, click on the Start button.

2.3. Merge a file

To merge a split file, select the Open command available on the contextual menu
for the split file (with extension .spl or .sfe).
