Introducing ClarisWorks

ClarisWorks represents the next generation in integrated software with seamlessly integrated environments that offer powerful word processing, graphics, spreadsheet, charting, database and communications functions. Unlike existing integrated products, which force users to constantly switch "modules," ClarisWorks lets you access different tools from within a single document. With ClarisWorks you can start with a single document and add text, graphics, calculations and charts at any time.

ClarisWorks is the perfect fit for the Macintosh Classic, LC and PowerBook since the application is just 565K. Its XTND technology lets you read and write to dozens of popular file formats. Finally, since ClarisWorks shares the same interface as the rest of our software family, you can easily learn a dedicated Claris application if your needs grow.

ClarisWorks demonstration version

This ClarisWorks demonstration version is a full working version of ClarisWorks except for the following restrictions:

- Files will not save.
- Printed documents have a "ClarisWorks Demo" watermark in the foreground.

In order to fit on a single disk, this Demonstration Version does not include the ClarisWorks spell checker, thesaurus, online help, or the full set of XTND translators or communications tools.

For more information

See your authorized Claris reseller to purchase your copy of ClarisWorks today. Or call 1-800-3CLARIS for more information or the name of the authorized reseller nearest you.

Required equipment
