About:	Some informations about BLACKBOX

SHORTKEYS

F1	Help
F2	New
F3	Load
F4	Save
F5	Switch mode
F6	Options
ALT+F4	Quit

HOW TO PLAY WITH BLACKBOX?

The rules of BLACKBOX are very simple:

You first get a 8x8 black board (the Blackbox) where some Whatsits are hidden. You must discover their position. You get for this a super photons pulsor: you shoot on the side of the Blackbox, and you watch what happen to your photons. They can rebound the corners of the Whatsits, or be absorbed if they hit a Whatsit (the Whatsit is always hungry of photons, but is not dangerous for humans). Look bellow for some examples:

examples

Reflected: the photons exit where they entered.
Transmitted: the photons exit somewhere else they entered
Absorbed: the photons hit a whatis.

Of course, your photons can rebound on many Whatsits before being transmitted or absorbed.

When you think you get a Whatsit, click with left mouse button on its position. You will

get a Whatsit-test . Click again to remove it.

When you think you have the positions of **all** the Whatsits, click on the **Done** button.

The correct positions are , the wrong are

. If you don't have any wrong position, you win!

If you think that the Whatsits are too well hidden, click on **Abandon** button to see their position. If you liked this configuration, you can save it.

Press "**New**" button to restart.

You can build your own games. Choose "Build mode" in the "Game" menu, then click with the left mouse button to put a Whatsit, click again to remove it. You can have 1 to 10 Whatsit in a Blackbox (not more because they are quarrelsome, they could break the Blackbox if they began to fight). When you finish, you can save it immediatly, or play with it by clicking on "**Done**" button. You can return to the "game mode" by choosing "Game mode" in the "Game" menu.

You can later load a saved game by choosing "Load" in the "Game" menu or using the Drag-and-drop technique: choose a Blackbox file (**.bbx** extension) in the File manager, then drop it on the Blackbox window.

HINTS

- 1- Think!...
- 2- Start to test the sides of the board (numbers 02, 07, 10, ...)
- 3- Use the Whatsit-test to test your solution.
- 4- Build your own strategy...

- 5- Playing Blackbox with a friend is very fun with two sheets of paper during boring courses at school!...
