

FLIGHTCHECK® Views

FLIGHTCHECK® allows you to view the data lists on the main window several different ways. This is offered to you via the Views palette which can be activated by selecting “Show Views Palette” from the Views menu, or by pressing command-H:

The Views palette allows you to pick and choose how you would like to view the lists of colors, fonts and images. By clicking on the desired “problem” buttons, you can selectively obtain lists of the offending elements.

For example, to instantly see which fonts are currently active in your system, click the “Active Fonts” button within the Fonts area of the palette. The main screen will then redisplay the fonts list showing only those fonts which are active.

You can use the “Problems” buttons at the bottom of each area to get the entire lists of the problem elements.
