

PortCGI - A very basic script that demonstrates connectivity between a Mac web server and Extensis Portfolio 4.0 for the Macintosh.

This script uses Parse CGI to handle the data coming in from the Web server. Parse CGI is shareware and can be downloaded at:

<http://www.tr.org/software/home.html>

[Note that if you decide to use Parse CGI as part of your web solution, you will need to pay the shareware license fee. For more information, contact the developers at the URL listed above.]
