The legacy of Andromeda Series Filters continues with release of **Velociraptor**, technology for velocity trails.

Velociraptor, a new motion trails plug-in provides a variety of trails not available in other plug-in or in high end special effect applications. The filter can create a velocity trail on a selected feature in an image by streaking out a choice of stylized trails that can arc, bounce, cascade, converge, curve, decline, fade, jolt, jitter, loop and spiral.

The User Interface is shown in standard mode in the image called VelociUi.tif on this disk. The bouncing and receding trail applied to the jack reflects the velocity trail selections as shown in the UI.

Check out the Andromeda Art Gallery for some great **Velociraptor** sample images.

CALL US AT 1.800.547.0055 FOR FURTHER INFORMATION AND ORDERING.
Thanks.
