## Question & Answer

### **Q. What do I get when I register Dominoes?**

**A.** When you register Dominoes you receive the latest version of Dominoes **along with an additional free game**, and the return of that youthful sense of optimism you once had about the world.

And if that weren't enough, the registered version of Dominoes loads much faster and does not display the logo screen in-between games. Wow!

### **Q. How can I register Dominoes?**

**A.** It could not be simpler. You can register **Dominoes** in one of three ways.

#### 1) Cash, Check or Money Order

When the program first starts click on the Cash Order button and fill out and print the order form. Mail the order form and the amount due in the form of Cash, Check or Money order to:

Greg DeBacker  
140 Bay St., #7  
Santa Cruz, CA  
95060

Send US dollars or checks drawn on US banks only.

#### 2) CompuServe's Shareware Registration Forum

If you are a member of CompuServe you can use their Shareware Registration forum to register the software. GO SWREG to get to the forum. Once there follow the on screen instructions. Use ID **9766**

#### 3) Credit Card Orders

You can order with MC, Visa, Amex, or Discover from Public (software) Library by calling 800-242-4775, Ext 14706 or 713-524-6394, Ext 14706. Order by FAX to 713-524-6398. You can also mail credit card orders to PsL at P.O.Box 35705, Houston, TX 77235-5705.

### **Order Product Number 14706**

**THE ABOVE NUMBERS ARE FOR CREDIT CARD ORDERS ONLY. THE AUTHOR OF THIS PROGRAM CANNOT BE REACHED AT THESE NUMBERS.**

Any questions about the status of the shipment of the order, refunds, registration options, product details, technical

support, volume discounts, dealer pricing, site licenses, non-credit card orders, etc, must be directed to:

Greg DeBacker  
140 Bay St.,#7  
Santa Cruz, CA  
95060  
Internet: 71042.36@compuserve.com

To insure that you get the latest version, PsL will notify me the day of your order and I will ship the product directly to you.

**Q. How much does it cost to register Dominoes?**

A. Another excellent question. The cost of Spades is **\$19.50** plus **\$4.00** for shipping.

**Q. What language is Dominoes written in?**

A. Dominoes is written in \*Visual Basic 3.0.

**Q. I had to get a copy of VBRUN300.DLL in order to run Dominoes. What is this file?**

A. VBRUN300.DLL is the run-time version of Visual Basic. It is needed to run all programs written in Visual Basic 3.0. VB stands for Visual Basic; RUN stands for run-time; 300 represents the version number; and DLL stands for Dynamic Link Library.

**Q. I know my sound card is configured correctly because it works with other Windows programs, but it only works some of the time with Dominoes. What's wrong?**

A. If Dominoes encounters any problems with WAV files while you are playing a game it simply stops trying to play them. Go to the Sound section of the Options dialog box and select each WAV file you are using one at a time and click on Test. If there is a problem with the WAV file the Test button will tell you there is a problem.

**Q. How can I make Dominoes play faster?**

A. I've noticed that the number of colors your video driver is displaying has the most effect on the speed of the game. Dominoes will run best at 16 or 256 colors.

All applications use Systems Resources (different from memory). To see how much Free Systems Resources you have select "About..." from the Help menu of Dominoes main window. At the bottom of the About window you will see something like the following:

**Mode: Enhanced**  
**Free Memory: 22696 kb**  
**Free User Resources: 83%**  
**Free GDI Resources: 59%**

The last two, User and GDI Resources are the important ones here, Dominoes runs best if they

are at about 80% and 60%, respectively. If they are well below these values try closing any other applications that are currently running to free up Systems Resources. Of course, the more memory you have the better.

**Q. Where did you get the rules for Dominoes? They're different than the way I play.**

**A.** The rules for this version of Dominoes were taken from the book "Hoyle's Rules of Games, Second Revised Edition", by Albert H. Morehead and Geoffrey Mott-Smith. Library of Congress Catalog Number: 83-61703.

**Q. Can I get a copy of the source code for Dominoes?**

**A.** No, I'm sorry, I don't give away the source code, but for a price....

**Q. Do the players ever "look" at each others hands?**

**A.** That would be cheating. No, they don't.

**Q. What are the files DOMINOES.INI and DOMINOES.INF for?**

**A.** DOMINOES.INI stores the option settings for all the users so that every time a user starts a game the same options (e.g. Play To, Sound, Color, ect) will be set as they were the last time they played.

DOMINOES.INF stores all the information about the players, both human and computer. This is where the Win/Loss numbers are kept. Also, when you have registered, this is where registration information is kept.

If the DOMINOES.INF file becomes corrupted and needs to be deleted it will be recreated the next time you play. If this happens, though, you will lose all the Win/Loss numbers and you will need to supply your registration number the first time you play the game after it has been deleted.

**Q. Where do I write to if I have comments about the game?**

**A.** You can write to me at the same address you send your registration fee listed in the first question, or you can E-Mail me at:

CompuServe # 71042,36

Internet # 71042.36@compuserve.com

World Wide Web <http://ourworld.compuserve.com/homepages/gregdebacker>

I encourage your comments, suggestions, and complaints.

\* Visual Basic and Windows are a trade marks of Microsoft Corporation.

## Player's Options

Access all the options by selecting "Options..." from the Options menu.

Player Options is where you set up the Human Players and Computer Opponents for the game. The list of Human Players on the top and Computer opponents are on the bottom.

Each side has it's own list of players, Add and Remove buttons, and a text box for adding names to their respective lists.

<b>Human/Computer List</b>	A list of the available human/computer names from which you can chose.
<b>New Human's/Computer's Name</b>	Here you can type in a name, and then click on "Add" to add your name to the list.
<b>Add Button</b>	Adds the name you typed into the text box to the list
<b>Remove Button</b>	Removes the name displayed in the list from the list.
<b>Apply Button</b>	Sets the name selected in the Human List and the name selected in the Computer list as the current player and opponent.

The "Human" and "Computer" selections in their respective lists can not be removed.

## Game Options

Access all the options by selecting "Options..." from the Options menu.

Below is a description of the Game Options available to you.

**Play To** - Determines how far a game is played until a winner is decided. The choices are 100 points, 200 points, 400 points, 500 points.

**Speed** - Determines how fast the bones are displayed and how long of a pause there is in between plays. The Choices are:

<b>Super Fast</b>	This is as fast as your computer can go.
<b>Fast</b>	There are slight delays between the time you play and when your opponent plays.
<b>Medium</b>	The delays are a little longer than the Fast setting.
<b>Slow</b>	Delays are longer still.

**Play Sounds** - WAV files are played on certain events when checked.

**Red End Marks** - The Playable ends of the table are marked in either Red or Green. When this is checked Red End Marks are used, otherwise they are Green.

### Color

At the bottom is a picture of a Domino on a colored background. To change the color of the background click anywhere on this picture. A color dialog box will open and you can select a new color.

## Sound Options

Access all the options by selecting "Options..." from the Options menu.

If you have a sound card you can attach WAV files to events in Dominoes. Below are a list of the events you can attach WAV files to:

<b>Drop Bone</b>	WAV played when you drop a bone on the table.
<b>Wrong Bone</b>	WAV played when you drop a bone that can not be played.
<b>Lose Round</b>	WAV played when you lose the current deal.
<b>Win Round</b>	WAV played when you win the current deal.
<b>Lose Game</b>	WAV played when you lose the game.
<b>Win Game</b>	WAV played when you win the game.
<b>Score Points</b>	WAV played when anyone scores points.

Dominoes is shipped with several WAV files. However, you can chose to attach your own WAV files to the events listed above.

Above the listed events in the Sound section of the Options box there is a directory and file list box for you to find WAV files on your computer's hard drive. Once you have found the specific WAV file you wish to attach to an event make sure that the specific event is selected and then click on the "**Set Wav**" button.

If you don't wish to have a WAV file attached to a particular event select that event and click on the "**Clear Wav**" button.

You can test a WAV file by selecting it from the file list box and then clicking on the "Test" button. If for some reason the WAV files are not playing during the play of the game, and you know that your sound card is set up correctly, the "**Test**" button will tell you if any errors where encountered while it was trying to play the WAV file.

Any errors encountered playing WAV files during the play of the game will be ignored and no error messages will be displayed. The WAV files will simply no longer play until you have fixed the problem or removed the offending WAV file.

## Menus

### File

<b>New Game</b>	Starts a new game.
<b>End Game</b>	Ends the game you are playing.
<b>Save Game</b>	Saves the game you are playing to disk.
<b>Save Game As</b>	Allows you to give the saved game a name.
<b>Load Game</b>	Loads a saved game.
<b>Exit</b>	Exit Dominoes.

### Options

<b>Opponent</b>	You can show or hide your opponents hand and set the style of play for the opponent.
<b>Display Scores</b>	Displays a break down of the scores for the current game.
<b>Advise Play</b>	The computer will give you advice on your next play.
<b>Auto Play</b>	The computer will play your hand for you.
<b>Statistics</b>	Shows the statistics for the current game and a history of the all the players.
<b>Options</b>	Displays the Options dialog box with all the game options.
<b>Bones Played</b>	Displays all bones played so far in the deal.

### Table

<b>Find Left Bone</b>	Move the table to the left playable bone.
<b>Find Right Bone</b>	Move the table to the right playable bone
<b>Find Bottom Bone</b>	Move the table to the bottom playable bone
<b>Find Top Bone</b>	Move the table to the top playable bone

### Help

<b>Help Topics</b>	Open this Help file.
<b>About</b>	View the About Box for information about version number and system's resources.
<b>Display All Bones</b>	Displays the entire deck of Dominoes. This can be helpful if you are not familiar with the deck.

## Dealing

A full set of Dominoes consists of 28 tiles. These tiles are referred to as **bones**. The lowest value bone is the 0/0 and the highest value bone is the 6/6. If you are not familiar with the bones you can view the entire deck by selecting **Display All Bones** from the Help menu.

When you start a new game all 28 bones will be displayed face down on the table and each player will chose one bone to see who deals first. You chose a bone by clicking on it. The player who draws the highest value bone will be the first dealer.

After the dealer has been decided all 28 bones will be redisplayed on the table and each player

will draw 7 bones from the 28 bones. These 7 bones are your hand.

The remaining 14 bones will be stored in the **Bone Pile**. The Bone Pile is a reserve which both players can draw on when they are unable to play a bone from their hand. To draw a bone from the Bone Pile you click on the button labeled **Bone Pile** to the left of your hand. Right-clicking on the **Bone Pile** button will tell you how many bones are left in the pile.

When you or your opponent have played all of the bones in your hand the next round will begin with a new deal.

See also [Playing A Bone](#) for more information.

## Playing A Bone

You play a bone from your hand by dragging it with the mouse and dropping it on the table. The bones you drop on the table must match up with like bones already on the table.

If there were one bone on the table with a 5 on the left side and a 4 on the right side you could only play a bone from your hand that had either a 4 or a 5 on one of it's ends.

As you drag a bone from your hand over the table the bone will shift into place when it moves over the end of an existing bone that has a like number as the bone you are dragging.

Most bones are played end to end. Bones that are double sided will be played crosswise on the table.

Until the **Sniff** has been played there are only two ends on the table which can be played on. After the **Sniff** has been played there are four sides to play on.

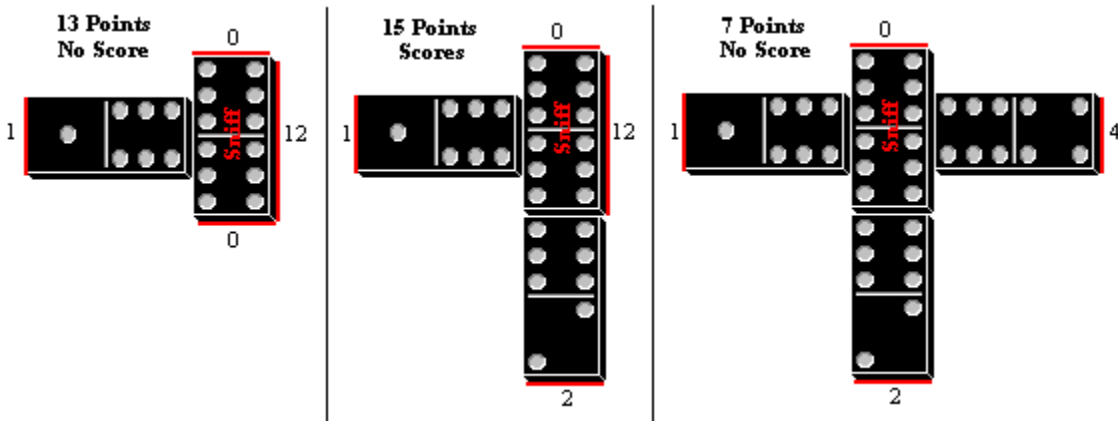

See also **Scoring** for more information.

## Scoring

There are two ways to score points in the game.

First, points are scored when the four playable ends of the bones on the table add up to a multiple of 5. If the ends add up to 5, 10, 20, or 35 you score those points. If the ends add up to 7, 13, 22, or 31 then no points are scored.

Until the **Sniff** has been played there are only two playable ends. After the **Sniff** has been played there are four playable ends. The top and bottom ends of the **Sniff** don't count into the scoring until they have sprouted branches.

The second way to score points is to be the first player to play all the bones in your hand. Whoever plays out their hand first gets the remaining points in their opponent's hand, rounded to a multiple of 5.

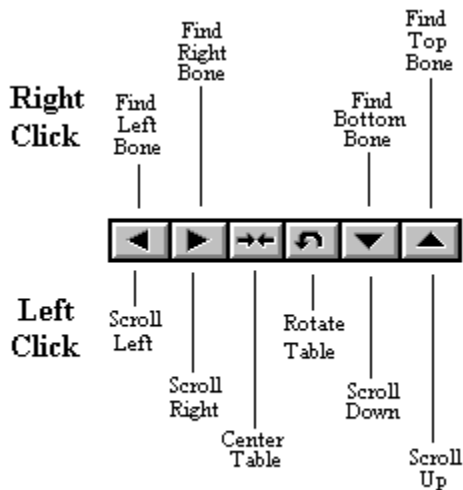

If you are unable to play a bone when it is your turn you will draw a bone from the **Bone Pile**. You will continue to draw bones from the **Bone Pile** until the pile is empty or until you can make a play.

If the **Bone Pile** empties and you are still unable to play then the play will pass to your opponent. After your opponent plays it will be your turn to play again. If neither you nor your opponent can play, and the **Bone Pile** is empty, then the next deal will begin. If this happens which ever player has the fewer remaining points in their hand will score the points left in their opponents hand, rounded to a multiple of 5.

## Moving The Table

After several bones have been played on the table you will not be able to see the entire table at one time. There are two ways you can move the table to bring different ends into view, or to center or rotate the table.

The diagram below describes the buttons on the panel in the upper left-hand corner of the table. If you click and hold down the mouse button on the Left, Right, Up, or Down buttons the table will continue to scroll until you lift up on the button. You can right-click on the buttons to move to a specific table end.

You can also use the **Table** menu to move quickly to one of the four playable ends. This is the same as right-clicking on the arrow buttons as described above.

<b>Find Left Bone</b>	Move the table to the left playable bone.
<b>Find Right Bone</b>	Move the table to the right playable bone
<b>Find Bottom Bone</b>	Move the table to the bottom playable bone
<b>Find Top Bone</b>	Move the table to the top playable bone

These menu options have hot keys you can use to execute the menu commands quickly. To execute the hot keys you hold down the **Ctrl** key while you press the letter associated with the menu.

<b>Find Left Bone</b>	Hot Key = <b>Ctrl+Z</b>
<b>Find Right Bone</b>	Hot Key = <b>Ctrl+X</b>
<b>Find Bottom Bone</b>	Hot Key = <b>Ctrl+C</b>
<b>Find Top Bone</b>	Hot Key = <b>Ctrl+V</b>

At first the corresponding letter used for the hot key might not make sense. The letters Z, X, C, V are in order from left to right on the keyboard. These letters also go in the same order as the buttons described in the diagram above (Z - Left, X - Right, C - Bottom, V - Top).

Also, all of these letters are right next to one of the **Ctrl** keys so you should be able to execute the commands easily with one hand.

See also [Viewing The Table](#) for more information.

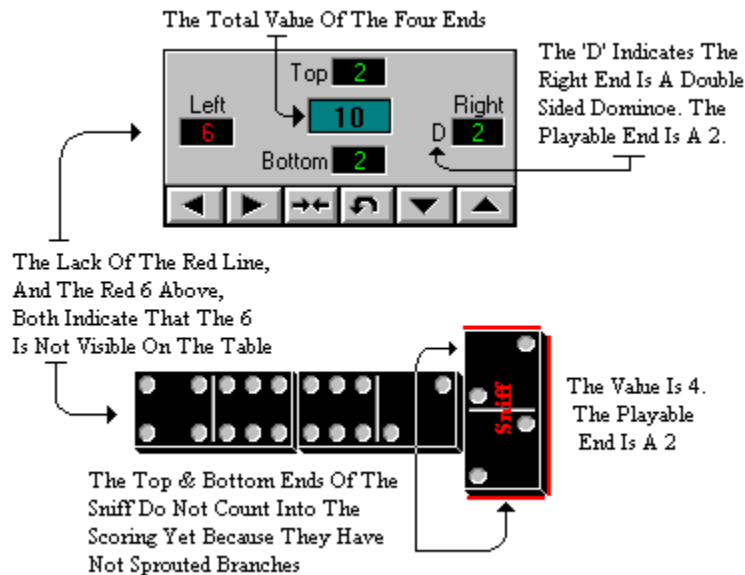

## Viewing The Table

After several bones have been played on the table you will not be able to see the entire table at one time. Along with different ways to move the table there are some visible clues to tell you what part of the table you're looking at.

The panel in the upper left-hand corner of the table tells you the value of the playable ends and the total value of these ends. When an end is currently visible on the table it's value will be displayed in green on the panel. When it is not currently visible it will be displayed in red. Partial bones are not displayed.

The playable ends will always be marked with either a red or green line. Even if a domino appears to be the last bone on an end, if it is not marked with a colored line it is not.

See also Moving The Table for more information.

## The Objective [See Also](#)

The name of the game is **Sniff**. Sniff is the most popular of all domino games and has been played all over the world for hundreds of years. The domino deck consists of 28 tiles. These domino tiles are commonly referred to as **Bones**. The lowest value bone is the 0/0 and the highest value bone is the 6/6. If you are not familiar with the bones you can view the entire deck by selecting **Display All Bones** from the Help menu on the main screen.

The objective to the game is, of course, to win. This is done by scoring points during the play of the game and by being the first to play all of the domino tiles in your hand.

The flow of the game is much like a card game in that each hand begins with a deal and continues with consecutive hands until a player has met or exceeded an agreed upon winning score.

A deal is considered finished when one player has played all of the bones in their hand or when both players can no longer play.

Each player's hand consists of 7 bones. The remaining 14 bones go in the Bone Pile. The bone pile is used by both players to draw from when they don't have a play.

Graphical Device Interface: Used under Windows to create, track and remove graphics.

Creates, tracks, and removes windows and their properties.

The **Sniff** is the first Double Sided bone played in a deal. This domino is labeled with a red **Sniff**. This is the only domino that can be played on all four sides. The top and bottom sides do not count into the score until they have sprouted branches.

The **Bone Pile** consists of the 14 bones leftover after the deal. You can see how many bones there are in the bone pile by selecting **Statistics** from the Options menu.
