

Resurrection 1.0a13

Pre-release software, use with Caution!

This software is an Alpha release, this means it is still under development (not even a Beta release!) and is disclosed to you with the intention that you provide me with feedback like feature suggestions, bug reports etc., send e-mail to witness@weblayout.com.

Known bugs and glitches:

- Hxxx template fields don't display anything
- The scrollbar thumb in the hex editor doesn't work
- Drag & Drop only works if the type to be dropped already exists in the destination file.
- Icon editors don't have a "generate Mask" feature yet.
- The "Set" buttons for window limits in WIND and DLOG editors don't do anything.
- The 'icns' editor requires MacOS 8.5 or better or it'll go kaboom.

Resurrection is provided "as is". Use at your own risk. Please report any bugs to "witness@weblayout.com". This software should not be used on vital files or files of which you don't have any backup copies made.
