Stockpix™ Fast Start (Windows)

Welcome to Stockpix™ Royalty Free Images!
This CD is usable on both the Mac and Windows platforms. This means that o Stockpix™ CDs work on most popular computer systems. Our image format is usable on all the major software packages on either platform. Stockpix™ have provided a customised browser for the images on this CD so that you can easily view, browse, and search the 100 images on the CD. Images can be dragged directly into your publishing program from the browser. To use the browser, you must first install the Kudo reader.Follow these steps for a quick start

To browse the image files on the CDROM proceed as follows:

1. Install Kudo from the opening screen that appears when you put the CDROM into your computer or double click on AUTORUN.EXE or SETUP.EXE from the File Manager/Explorer.

2. The Kudo files are installed into the Kudo folder of your hard disk and shortcuts are created in the Windows Start Menu for Kudo and the Kudo catalogs. The catalogs stay on your CDROM and are opened from the Windows Start Menu.

3. Open a catalog, select a thumbnail image record and double right click to view the original image file. Left click to open the image file in an associated application such as Corel Draw® or Photoshop®. If no application is associated with the image file, the built-in Kudo viewer will try to open the original image.

4.   Maximize the catalog window and click on the scroll bar to move through the catalog. Click on the Toolbar buttons to view the thumbnail images in different sizes.

5. Position the cursor over the Riffle control (the double-headed arrow with tick marks) in the lower right-hand corner of the Catalog Reader window. Click and hold the mouse button down over the Riffle control to zip through the contents of the catalog. Using the Riffle control is like pressing Play and Fast Forward or Reverse on a VCR to quickly move forward or backward while watching the images flash by.

6. Click on the Find button on the Toolbar to search for image files in the catalog using text descriptors. The Notes fields in the Find dialog box can provide useful clues when searching for images using Keywords.

7. The results of search operations are presented as a found set of thumbnail image records. Most Kudo catalog searches are visual browsing journeys, but text searches can help to narrow down the browsing range of image records. Select "Find All" from the "Image" menu to display all of the thumbnail image records in the catalog.

8. If you are using PageMaker®, QuarkXPress®, Microsoft Word® or other OLE 2.0 applications, select an image and drag it into the document window. Some applications require   you to place the image in the title bar of the document window. Kudo will find the original image file and place it in that document. Kudo helps you to find, view, print and use digital images.

Kudo creates and reads catalogs that can contain thousands of records of image files. Each record is made up of a thumbnail size image and associated text fields which describe the file. Think of each thumbnail as a miniature representation of your original image, except that it takes up very little memory and is formatted for easy distribution. Kudo Catalog Reader will not make or update catalogs. To run Kudo for Windows, you need a computer running Windows 3.x or Windows 95/NT with at least 12 Mbytes of RAM and a color graphics card with at least 1MByte of VRAM.All trade marks and product registrations are the property of their respective owners.
