

WinAto Version 1.5
September 13, 1992

There were no known bugs at the time of release.

WinAto Version 1.5 includes an optional interface to a spell checker which I have developed. Version 1.0 of SpellChk will be released to Library 1 of IBMCOM as SPLCHK.EXE. It will also be uploaded to WINADV and will probably be in Library 1, new uploads, for a period of time before being transferred to Library 11, shareware. Version 1.0 of SpellChk provides spell checking of messages being prepared or edited in WinAto by push buttons in the WinAto edit windows. As a standalone program, it may be used to check text files, or, it may be used to check the contents of the clipboard. A second version of SpellChk will quickly follow the first version. Version 2.0 will be able to operate interactively with another application while you are entering the text.

Registered users of WinAto will be able to register SpellChk for \$15.00. The registration of SpellChk 1.0 will also include 2.0 when it is released at no extra charge.

Your comments and suggestions are welcome. Thank you for trying WinAto.
