

## System

This page gives details of your computer's specification.

You can also change the sound driver that HELICOP uses. When HELICOP starts it automatically detects and uses your system's default sound driver. Sometimes there are alternative drivers available. If you are having problems with audio, try using one of the other drivers (if any) listed here. To try a different driver, click on the **Change DirectSound Driver** option.

If HELICOP runs slowly on your computer, select the **Speed Boost** option. This is designed to let HELICOP run quickly on computers that have no sound or graphics hardware acceleration.

On this page you can also find information about the exact version of HELICOP you are using. This information will be helpful if you need technical support.

Click on **Back** to return to the main Control Screen.
