Once you've clicked the Bevels tab, you're ready to start creating the bevel effect. First, you need to indicate that you want to apply bevels to the object.

1. In the Extrude Roll-Up, enable the Use Bevel check box.

2. Enable the Show Bevel Only check box. If you leave this check box disabled, you'll also apply an extrusion effect to the text. For this Tutor, we'll concentrate on beveling only.
