

The Color Wheel page provides three basic options for filling beveled surfaces: **Use Object Fill, Solid Fill, and Shade**. The Shade option produces an interesting effect in this case.

1. Enable the Shade button.
2. Click the From **color picker**, then click the black color swatch.
3. Click the To color picker, then click the white color swatch.

4. Enable the Use Extrude Fill For Bevel check box.
5. Click the Apply button.
