

In OCR-Trace, there are many tracing options and variables you can control. In these steps, we will show you one way to trace your image, but it is only one of many. See the online Help for more details on working with OCR-Trace.

1. In OCR-Trace, click File menu, Open.
2. Choose a bitmap of your choice, then click the Open button.
3. Click OCR-Trace, Perform Trace, By Outline. Areas of color in the image are converted into vector objects.
