

Now that you have a basic extrusion, you can start adjusting it. The first step is to set the location of the vanishing point: the point toward which the extruded surfaces extend.

1. **Select the extrusion** with the Pick tool.
  
2. In the Extrude Roll-Up, click the Edit button. The **vanishing point marker** appears on the screen.

3. Drag the marker to a new position.
4. Click the Apply button.
