

Now that you have a basic text/path group, you might want to re-position the text. In closed path objects, the Fit Text to Path command places text along the outside of an object's path, by default. You can place text inside the object using the Property Bar.

1. Click View, Toolbars. Enable the Property Bar button.
2. Select the text/path group with the **Pick tool**.

3. Click the Place Text On Other Side button in the Property Bar.
