

When you drag an object onto the Favorite Fills And Outlines section of the Scrapbook, a dialog box automatically opens. This dialog box contains a series of check boxes that allow you to specify which properties you want to save.

You can specify the options you want by enabling and disabling the appropriate check boxes. When you're done, you click OK to add the favorite fill or outline to the Scrapbook.

Once you add a favorite fill or outline, you can apply it the same way you applied preset fills and outlines.
