

Like the Photos and Clipart sections, the Favorite Fills And Outlines section gives you drag and drop access to the items it displays. In this case, the items are preset fill and outline properties that you can apply to any object created with CorelDRAW's drawing tools.

Unlike the Photos and Clipart sections, however, you can also use the Favorite Fills And Outlines section to store your own fills and outlines. That way, you can apply them to objects without having to re-create the fill or outline each time.
