

Once you've saved the script, you can use the Script and Preset Manager to play it back. In this case, playing the script will create an ellipse exactly like the one you just created and place it in the same spot on the Drawing Page.

1. In the Script and Preset Manager, select your script from the list box. The scripts are listed alphabetically.
2. Click the **Play** button.

A new ellipse is added over top of the one you created

when recording the script.
Move this ellipse to see the
original ellipse.
