You're now ready to play back the new script you've created. This time, however, you'll be applying it to an object in your drawing to change the object's appearance. To do so, you'll need to have some objects to use.

Click here to add some objects to the Drawing Window.

1. Select any of the objects with the Pick tool.

2. In the Script and Preset Manager, select your script from the list box.

3. Press the Play button.
