

Now that you've created a duplicate object, let's modify the color and change its position to create the shadow effect.

1. Select the duplicate using the **Pick tool**.
2. Click 20% black in the **Color Palette**.
3. Click Arrange menu, Order, To Back, or [click here](#).

If you want to adjust the position of the shadow, use the arrow keys to nudge the object up, down, to the left or right.
