You can change the crosshatch and fill colors used to identify Internet objects in your drawings. To change the default settings, change the background and foreground colors, making sure no object in your drawing is selected. To specify the cross-hatch and fill colors:

1. If the Internet Objects toolbar isn't displayed, right-click any toolbar and click Internet Objects from the menu.

2. Making sure no object is selected, click the Foreground Color button, and click a color swatch to choose the cross-hatch color.
