

Demon Internet Suite Trial Version

This 'Readme' describes some of the things you will want to do once the Demon Internet Suite is installed. There are two other 'Readme's, Fyi28.wri and Readw95.doc.

It also explains how to upgrade to the full Demon Internet Suite which offers a set of comprehensive user guides, a copy of SoftQuad's HoTMetaL v3 light for designing your own Web pages, a 60 day evaluation version of Cyber Patrol which is a leading Internet filtering package, and a copy of Progressive Networks' RealAudio Player for receiving audio across the Internet.

New Users of the Internet are recommended to study the Fyi28.wri document, which explains the basic rules of 'Netiquette' (Network Etiquette) that all users should follow.

The Readw95.doc document offers advice for Windows 95 users on running Turnpike with the Windows 95 Dial Up Networking (DUN) software. The Readw95p.doc file on the CD contains the same advice, but with pictures. These can be read using either Word 6 or the Windows 95 WordPad. However, there's no need to use the Windows 95 DUN unless you particularly want to as Turnpike provides its own Winsock which is easier to set up and use than the Windows 95 DUN.

Running Turnpike for the first time

After Installation has been completed, the first thing you need to do is pick up the list of newsgroups available to you. If there's any mail waiting for you, this will be collected at the same time.

To do this, you need to run the Connect program - for example by double-clicking on its icon.

Assuming you're using Turnpike to dial, Turnpike will then display its 'Connect' dialog for you to go ahead and connect to your Access Provider. Simply click the **Connect** button to do this. (If Turnpike isn't being used to dial, you will instead see a message about a 'Third-party Winsock'. Leave this message on the screen while you dial up using whatever software you've been using to do this up to now, then promptly switch back to the Turnpike Connect program and allow it to continue.)

Messages on the Status bar at the bottom of the display will then show Turnpike collecting news (in this case, the list of newsgroups) and picking up any mail that's waiting for you.

Collecting the list of newsgroups takes a little while, so while this is going on we suggest you click the Ping button on the toolbar. This displays the Ping dialog ready set up to 'Ping' your Access Provider. Pinging provides a good way of checking that all is well, so we suggest you try this.

When Turnpike tells you **News connection closed**, you can disconnect from your Access Provider (by clicking the **Disconnect** button) because Turnpike has now downloaded all the information it is going to. ***But don't leave Turnpike Connect until the separate News completed - xxxx articles fetched and filed message has appeared, signalling that Turnpike has finished filing this information.***

What to do next

At this point, we suggest that you try out the main Turnpike program.

If Turnpike Connect is still running, you can run the main Turnpike program by clicking the **Mail/News** button on the toolbar. Alternatively, you can return to the Turnpike program group / folder and double-click on the **Turnpike** program icon.

When the program has loaded ...

*** Read any mail that has arrived for you**

If any mail has arrived for you, the 'Mailbox' icon at the bottom of the Turnpike display will be showing a little pile of papers in its top tray and flashing.

To see this mail, double-click on the Mailbox icon to go into your mailbox. The messages that have arrived will then be listed in the upper part of the mailbox display. To read a message, double-click on it to open it - then when you've finished reading it, close it and open another. You can use the space bar to open each unread message in turn, if you prefer.

Note: Each message actually starts with a 'Header' comprising several lines of administration information, but Turnpike normally limits what it displays to the subject, the author and the date. If you would like to see the full header on a message, take the **Display Header** option from the Options menu.

*** Set up a 'newsstand' for your newsgroups**

To do this, go to the **File** menu, select **New...** and then choose **New newsstand**. This starts the Newsstand Setup Wizard to guide you through creating a newsstand. Select each newsgroup that interests you and then click the **Add** button. You can use the **Find** slot to locate particular subjects -- for example, ***music** will find all newsgroups that include the word music in the newsgroup name.

It is best to try only a few newsgroups at first, otherwise download times may become rather long. New users of the Internet are recommended to subscribe to the **news.announce.newusers** newsgroup, while **demon.ip.support.turnpike** (if this is available to you) is the newsgroup for discussion of Turnpike. It is also a good idea to subscribe to any newsgroups provided for support and service announcements by your Access Provider. For example, Demon customers should consider subscribing to **demon.announce** and, if new to the Internet, to **demon.ip.support.newuser**.

After adding the newsgroups you want, click **Next** and fill in your details. Click **Next** again and give the newstand a name of your choice. When you click **Finish**, the newstand will be created for you. The Wizard allows you to go back through these steps and, of course, you can click on the **Help** button if you wish further guidance. It is easy to change any of the settings later by clicking the right mouse button on the newsstand and selecting **Properties**.

The Wizard will leave you with a view of the open newsstand, in which you will see the newsgroups you selected in the order in which you picked them out. If you want to change this order, drag the newsgroups up or down the list with the mouse, or use the **Move Up** and **Move Down** buttons.

Articles from the newsgroups you selected will be collected the next time you use Turnpike Connect to connect to your Access Provider.

*** Prepare any email messages you want to send**

To prepare an email message, select your mailbox then click the **Start new email** button on the toolbar. (If you can't see your mailbox to select it, you can look in the Windows menu.)

This calls up Turnpike's Editor ready for you to write your message. Simply fill in the email address of the person you want to write to in the 'To' slot; fill in the subject in the 'Subject' slot; and type the text of your message in the section above the solid blue line drawn across the display. (Note: There's no need to type a carriage return at the end of each line because Turnpike will automatically insert the required line breaks for you. There's also no need to worry about the number of characters per line as the margins are automatically set to give the recommended maximum of 72 characters per line in the font you are using.)

What's shown below the solid blue line is a 'signature' based on your full name, which Turnpike has inserted for you. This is just text which you can change in any way you want simply by editing it. After arranging the signature you want, we recommend taking the **Save signature** as option from the Signature menu and saving this signature as **standard.sig**: then Turnpike will in future insert this signature in your messages.

When you've finished preparing your message, click the **Post** button on the Editor toolbar and confirm that you want to post this message. The message is then put into your Out tray, from where it will be sent out across the Internet the next time you connect to your Access Provider.

Note: If, rather than send a new message, you want to send a reply to a message you've received, select it (or open it on the screen) and click the **Reply** button. This too takes you into Turnpike's Editor, but by taking the Reply option you automatically get the 'To' and 'Subject' slots filled in with the appropriate information from the original message. You also get a properly marked up copy of the original message in your reply. Simply cut out any bits of the original message you don't want to quote, add what you want to say and then click the **Post** button to add this reply to the collection of messages in your Out tray.

Exploring the Web

To explore the World Wide Web from Turnpike, you need to run the Connect program, connect to your Access Provider and then click the **WWW** button on the Connect program toolbar to run Microsoft Internet Explorer. (The Connect program provides the connection to the Internet over which the Internet Explorer accesses the Web.)

This takes you to the 'Starting page'. This and other Web pages contain underlined items, which are links to other Web pages or facilities. To call up any of these pages, simply click on the appropriate item - in the same way as you might call up different pages of information from a Help file.

The other way of calling up other pages is by entering the page's 'URL' in the Address slot at the top of the display. (If this slot isn't shown, call up the **View** menu and select **Address Bar**.)

What's shown in this slot is the URL of the Web page you are looking at. To go to a different page, simply edit the URL that's currently shown and press [Enter]. For example, if you want to call up the Lycos Internet Catalog, you can do this by replacing the current URL by the Lycos Catalog page URL (<http://www.lycos.com/>) and pressing [Enter]. (This Lycos page is actually quite a useful one to call up because it allows you to access information on a whole range of different subjects.)

Each page you call up is automatically added to a 'History' which the Internet Explorer records to make it easy for you to go straight back to pages you called up earlier. Simply use the Arrow buttons at the top of the screen to go back and forth through these pages - or call up the **File** menu and pick the page you want from the lower part of this menu. (The **More History** option in this menu calls up a display of all the pages you've visited, including in previous sessions.)

Note: Each new Web page you call up can take a little while to display, particularly where it contains a number of graphics. If there's apparently no response for 120 seconds, Turnpike will automatically display a message asking whether you want it to continue trying to contact the

source of the information. The idea of this message is to save you running up expensive phone bills when the remote computer you are dealing with is too busy to service your request at a reasonable speed. If you feel that this message appears too often, then the next time you connect to your Access Provider, pause at the Connect dialog and set the 'Idle timeout' to a larger number of seconds - or disable the feature altogether by setting the Idle timeout to 0.

Other Facilities

This introduction has only scratched the surface of the facilities Turnpike and Internet Explorer have to offer.

You can, for example, set up mailboxes for different types of mail; give yourself a range of email names and signatures to use (and arrange that the appropriate ones are used by associating these with different mailboxes and newsstands); tag messages with their subject so that you can pull out all the correspondence you've exchanged on a particular subject etc. etc. There are special features for News such as marking discussion threads 'interesting' if you want these drawn to your attention or 'uninteresting' if you don't, and 'Kill rules' to help you avoid cluttering up your disk with articles you don't want to read. There are also special features for shared systems that allow certain types of mail to be processed by any of a group of people.

Similarly, when you are connected to your Access Provider, there are additional facilities like Telnet, FTP, Finger and Traceroute and further features of Microsoft Internet Explorer to investigate.

The way to find out about all these features is from the on-screen Help. Either press F1 to call up the appropriate Help then click the **Contents** button to turn to its Contents page, or use the options offered in the Help menu. This will show you a list of the broad areas covered in the Help. Click on the area you are interested in to display a page of information on that, then work on through the information given. Alternatively, use the **Index/Search** option to call up pages on particular topics or, if there are [>>] and [<<] buttons at the top of the display, you can use these to 'browse' through a series of pages on related topics.

Note: *Turnpike, Connect and Microsoft Internet Explorer are separate programs and so have separate Help support. In particular, the Help file for the main Turnpike program covers Turnpike's 'Off-line' facilities, while the one for Turnpike Connect covers the 'On-line' facilities. The FTP facilities of Turnpike Connect also have their own Help file because these are provided by a separate program.*

At the end of the Trial period

If you are a Demon Subscriber

The Trial Version of the software will work indefinitely, at least for connecting to Demon.

We recommend upgrading to a full copy of The Demon Internet Suite -- so that you also have a set of comprehensive user guides, a copy of SoftQuad's **HoTMetaL** v3 light for designing your own Web pages, a 60 day evaluation version of **Cyber Patrol** which is a leading Internet filtering package, a copy of 'Progressive Networks' **RealAudio Player** for receiving audio across the Internet, and support for other Access Providers.

For Demon subscribers, the Demon Internet Suite costs just **£29.37** including VAT and Delivery, and can be ordered direct from Demon.

Either call Demon's Credit Card Line on **0181 371 1234**, email **sales@demon.net** or send a cheque (with your cheque guarantee number and your Demon host name on the

back) to:

Demon Internet Ltd (Windows software offer),
Gateway House, 322 Regents Park Road, Finchley, London N3 2QQ.

Please allow 28 days for delivery.

(Note: Calls to 0181 371 1234 may be monitored for training purposes. This information may be used for marketing purposes.)

If you are not a Demon Subscriber

The software will expire after 30 days.

If you would like to continue using Turnpike, you will need to upgrade to a full copy of The Demon Internet Suite. This includes a set of comprehensive user guides, a copy of SoftQuad's **HoTMetaL** v3 light for designing your own Web pages, a 60 day evaluation version of **Cyber Patrol** which is a leading Internet filtering package, and a copy of Progressive Networks' **RealAudio Player** for receiving audio across the Internet.

To order, either: phone Turnpike Sales on **0345 666333**
or: print and fill in the **Order Form** given below

The cost of the full single-user version (Product Code RETCDDIS) is £52.81
(£39.95 + £5 P&P + VAT).

Turnpike, August 1997

TURNPIKE ORDER FORM

**** for non-Demon subscribers ****

(Demon subscribers can buy at the special price of £29.37 - see above)

Yes, I'd like to order an Upgrade from the Evaluation version of Turnpike (Product Code RETCDDIS) Price: £52.81

I require (tick one only) CD 3.5" disks for Windows 95
 3.5" disks for Windows 3.x

Your details:
