<p style="text-align:center">"Predicting the Future"
with the Hawes Handicapping Method
- a new revolution in thoroughbred handicapping -</p>

"Predicting the Future" is a breakthrough in thoroughbred handicapping that allows anyone to quickly analyze and predict the winning horses in almost any race.   It's user interface has been designed from the ground-up to allow fast data entry and easy navigation.   The handicapping algorithms were designed by one of today's hottest handicappers and utilize many modern methods that quickly identify the best horses.   Try it today see why we named it "Predicting the Future"…

Features:

- Horses that have run in the last 90 days can be handicapped (unlike many competing products)
- Only data-entry source needed is a Daily Racing Form (no track program needed)
- Any track condition can be handicapped (unlike many competing products)
- Any track surface can be handicapped (unlike many competing products)
- Maiden races can be handicapped (unlike many competing products)
- Produces an easy-to-read printout of all horses in a given race
- Turf races can be handicapped!
- Calculation algorithm written in pure compiled 32-bit code for fast execution times
- Made to run at any screen resolution (including 640 x 480 for laptops)
- Runs on Windows 95 and Windows NT
- Easy-to-learn user interface
- Horse pictures!
- Horse sounds!
