

Introduction

Chiron, Version 2.0.1, the Problem Reference Manual for the Macintosh

Released on February 2, 1994

Hi! Welcome to the worlds best Macintosh problem reference manual, Chiron. This basically tells you the **System Error Codes** for bomb dialogs, and what those screwy little numbers mean under the **Sad Mac** icon you might get when you first turn on your machine. A new addition to version 2.0 is an explanation of all current **Macintosh virus's**, and what to do if your machine does become infected, as well as tips for protecting your Mac from infection in the first place. For more information about this stuff, go to that individual chapter.

To find a specific I.D. code, virus, or Sad Mac code quickly, use the Find command under the File menu.

To see how Chapters are broken up, and to jump to specific sections, hit Command-K (or Apple-K, same thing).

Good Luck!
