                HOW TO QUIT! <<<-----+

```

## 1.2 HOW TO QUIT TVAP

To quit TVAP, simply start the program again. By CLI or WB doesn't matter.

## 1.3 Introduction to TVAP

I wanted to do something half-mean-funny to my friend. I downloaded some gag-programs from BBS:s and AmiNet. Some of them were pretty good and I was quite pleased with them. However none of them did exactly what I wanted them to. So, I decided to write one myself. That way I now have a program that I know doesn't do any bad stuff (like formatting the HD) to my computer (or my poor friend's).

The program doesn't slow down your computer noticeably and can be exited.

---

## 1.4 Requirements for TVAP

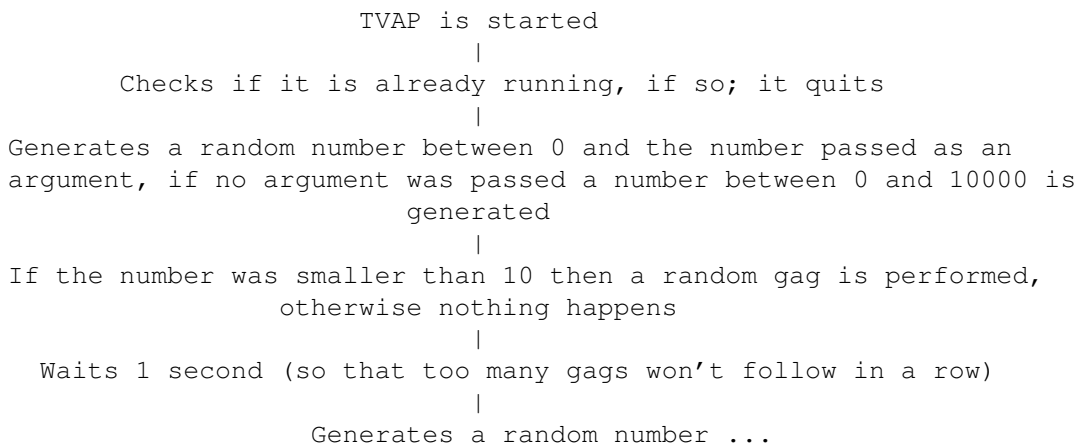

TVAP should work on any computer. But it requires the assign "T:" and probably a lot of patience (if you set the seed low)!

## 1.5 Usage of TVAP

TVAP can be started both from CLI and Workbench. CLI is recommended since any possible error messages won't be displayed when running from WB. To start TVAP simply doubleclick on it's icon in WB or type it's name in CLI.

An argument containing a number between 5 and 10000 can be passed. The bigger number, the smaller chance for something happening every second. If no argument is passed, this number will default to 50.

To easier illustrate how TVAP works, take a look at this 'flowchart':

So by increasing the number passed as argument, the chances for something happening decrease. Of course the opposite apply.

To quit TVAP, simply start the program again!

## 1.6 History of TVAP

History of TVAP - The Very Annoying Program.

v1.0

First release.

v1.1

Added scary face and sound. Picture made by me and sound found on an old HD, author unknown.

Changed default seed to 50.

Optimized code by removing some extraneous lines.

Changed the mouse-moving routine [to the better?].

Changed the hold down and let go of the right mousebutton routine into

two separate events. This way; the mousebutton COULD be held forever (unless the user clicks the button).

## 1.7 Future versions of TVAP

Future versions of TVAP will hopefully include this:

- More configurable
- Even more gags (such as moving windows)
- More flexible checking if TVAP is already running

Of course, I do more than happily receive more suggestions!

## 1.8 Author of TVAP

This program was written by Gustav "Gosweede" Gnosspelius in 1997.

I (Gustav Gnosspelius) take no responsibility for any damage TVAP may cause you or your computer. (It won't hopefully).

You may contact me by email at [gosweede@lindesign.se](mailto:gosweede@lindesign.se) or [gosweede@hotmail.com](mailto:gosweede@hotmail.com), the latter is preferred between august 1997 and june 1998 (although both will work) since I'll be spending a year in Austria and it will probably be harder to use the lindesign adress. I'm open to all kind of suggestions about TVAP and of course also criticism.

Finally, I'd like to excuse for messy layout of the guide, layout isn't my biggest talent..

Greetings goes to:

LotuZ (I heard you "knypplade" with a lady called Anita..)  
Mopz (Why don't you make it possible to call with FP to you?)  
!Lairfight! (Heard of any parties nearby?)  
Mr.X (How is the module-making going?)  
Mr.Psycho (Akilles is closed now, thought ou should know.)  
Dew\_Led (Can't you open your BBS?)  
And to the ones I forgot.

TVAP was made in Blitz Basic 2.1 in 1997.  
TVAP is (C) Gustav Gnosspelius
