

9. The Class Editor

The Class Editor will show all of the pupils that are in the Pupils folder inside the Master Spell folder or the same pupils you see in the Pupil menu. It allows you to change the settings of these pupils.

Note: The Class Editor is limited to editing five pupils for all but site license and world-wide licensed registered users.

Select the item [Edit Class...](#) from the Teacher menu. The Class Editor will take a look at all of the pupils in the Pupils folder and show this list on the left listbox. Settings can be selectively applied to several pupils at once by clicking and dragging through the list of pupils. To select multiple non-contiguous pupils, hold down the Command key and click each pupil.

The Class Editor does not create or remove pupils. Pupils can be created from the front panel by clicking the [New Pupil](#) button and pupils can be removed by deleting the pupil files from the Pupils folder in the Finder.

If you will be setting all of the pupil passwords, you may also turn off the requirement for pupil passwords and set them all in the Class Editor then later turn the pupil password requirement on.

If you created pupils without giving them passwords and you don't give them passwords in the Class Editor and you turn on the pupil password requirement in the [Preferences](#), then the pupil will be asked to provide a password when he/she loads his/her pupil file.

Tip: To allow the pupils to set their own passwords at login time, set the pupil's password to "password" in the Class Editor.
